To Whom It May Concern, My husband is a truck driver, and it is important to his work to have these features on satellite radio. Ever since he received XM, he uses it more than his current weather information on AM radio. It's much more accurate and up-to-date. It is also clearer to hear since the sound quality on AM radio is terrible. We still love XM radio, but I think these services are crucial. Please reject the NAB's petition 04-60 because I think the quality of XM's services are so much better than whatever local radio station he happens to be close to at the time.

Sincerely,
Roberta Colvin

P.S. That's also a feature he loves. He can get it wherever he is, anywhere in the country, and that's especially useful in mountainous terrain where signals fade very often. In case you don't know, there is a lot of rugged terrain in this country, and my husband travels a lot of it, a lot of the time.
